

Wonderland SOC

Incident Investigation Notes

Finding name: Frothly Insider Investigation

Analyst assigned: Elizabeth Watt

Description of System(s)	
Type (Laptop/Desktop/Server/VM/etc.)	
System Operating System	
System Name	
System IP Address	
Other hosts involved: Hostname/IP address	

User information (as applicable)	
User(s) involved in incident	richard@yellowtallon.co (united states)
Other user(s) alias involved	richards Mexico

MITRE ATT&CK info	
Tactic / Technique - ID	

Wonderland SOC

Incident Investigation Notes

Investigation Details

Mateo accessed the supply room excessively during the period when the inventories were performed.

Richard's badge shows access to the supply room. Richard is a hybrid employee and Sales manager not assigned to this location.

Nathaniel, Richards' nephew and new Frothly Intern, attempted to access the supply room but failed because his badge was not programmed to access it.

Login Richard S

Correlating VPN data with Salesforce data shows Richard's login has likely been compromised, or he is sharing it with someone else.

Ransomware lockbit located on FROTHLY/richschlitzer 1

Additional Artifacts

Final Analysis

Richard Schlitzer's host has been infected with ransomware. We'll need to notify our incident response team and let Frothly know what we have found so appropriate responses can be taken before this spreads.

Ransomware has been identified on Richard Schlitzer's host. Frothly and Wonderland SOC will need to coordinate containment and recovery.

No insider threat was identified, however ransomware lockbit was identified on a single user's device.
